

# HASP License Manager Setup: Readme

---

This document describes supported operating systems, enhancements, issues resolved, known issues, and other relevant information for the HASP License Manager.

## Version 8.32.5.40 (May 2008)

### Supported Operating Systems

- Windows 2000
- Windows XP x86 and x64
- Windows Server 2003 x86 and x64
- Windows Vista x86 and x64
- Windows Server 2008 x86 and x64
- Windows 7 x86 and x64

### Enhancements

Support has been added for Windows Server 2008 (x86 and x64) and Windows 7 operating systems.

### Installing and Setting Up HASP License Manager Under Window 7

For detailed information on installing and setting up HASP License Manager under Windows 7, see the included document [135-Install\\_LM\\_Under\\_Windows\\_7.pdf](#).

### Issues Addressed

The following issues have been resolved:

- Ref #1931: `hasp_encrypt` and `hasp_decrypt` did not reset `IdleTime`.
- Ref #3296: A background check in HASP SRM Envelope did not reset `IdleTime`.

### Known Issues

- Ref #10025: To launch the HASP License Manager application under the Windows Server 2008 operating system:
  1. From the Control Panel, open the System Properties dialog box.
  2. In the System Properties dialog box, click the **Advanced** tab.
  3. In the **Performance** pane, click **Settings**.
  4. In the Performance Options dialog box, click the **Data Execution Prevention** tab.
  5. Select the option **Turn on DEP for all program and services except those I select**.
  6. Click **Add**, then browse to and select the HASP SRM License Manager application (by default, `C:\Program Files\Aladdin\HASP LM\nhsrvw32.exe`).
- Ref #5241: If you specify that HASP License Manager is to run as a service, when using a Vista operating system the License Manager service icon is not displayed in the system tray. This means that you cannot double-click the icon in order to change service protocols, as with other Windows operating systems. To change service protocols, use `nhsrv.ini`.
